

JavaScript Topic Review Notebook

Based on your original answers.

Legend: **RIGHT** | **INTERMEDIATE** | **WRONG** | **Teacher/Interviewer Answer**

Variables

RIGHT: Variable definition, var/let/const basics are good.

INTERMEDIATE: Declaration vs Initialization needs correction.

Teacher: Declaration: **let x**; Initialization: **let x=10**; Assignment: **x=20**;

Without keyword

WRONG: It does not give blank output.

Teacher: Non-strict mode creates an implicit global. Strict mode throws ReferenceError.

TDZ

INTERMEDIATE: Definition partially correct.

Teacher: TDZ starts when scope is entered and ends when execution reaches the declaration.

Hoisting

WRONG: JavaScript does NOT move code to the top.

Interviewer: Bindings are created during the Memory Creation Phase before execution.

Memory

INTERMEDIATE: Add let/const are hoisted but remain uninitialized (TDZ).

Shadowing

MISSING

Teacher: Legal: `let x=10; { let x=20; }`

Illegal: `let x=10; { var x=20; }` // SyntaxError

Global Object

WRONG: window is browser global object. globalThis is the standard global reference.

Output Questions

WRONG: demo()/test() output is **10** because of lexical scope.

WRONG: foo() output is **undefined** then **2**.

typeof

MISSING

Teacher: `typeof undeclaredVariable` -> 'undefined'; `typeof TDZ variable` -> ReferenceError.

Advanced

INTERMEDIATE: Modules are strict by default. Hoisting exists in both scripts and modules.

Final Score: 71/100

Strengths: Basics, scope, const, memory creation.

Revise: Hoisting, TDZ, lexical scope, shadowing, output questions.
